

BizCubed's Pentaho Upgrade & Migration Assessment

Process

We use a 3-step process to ensure our upgrade program provides you with the confidence to move from one version to the next – with a clear understanding of cost and of any production impacts.

Process Details

- 1. Initial baselining** of your Pentaho environments by one of our certified practitioners to:
 - Determine what files have been added / deleted / modified / unchanged
 - Create a register of all changes
 - Conduct the baseline assessment against an unchanged standard Pentaho implementation of the same version to identify file changes
 - List all content in Pentaho repositories
- 2. Assessment and Categorisation** of the changes
 - Each changed file is categorised to determine how complex the upgrade is likely to be
 - Assessment register lists all files categorised and potential change impacts
 - Risks and recommended actions are outlined
- 3. Upgrade / Migration Planning**
 - An estimate is provided of the effort the upgrade is likely to require
 - A plan is proposed for the upgrade / migration path

Deliverables

- > **Detailed Assessment Scorecard** fully mapping your Pentaho ecosystem
- > **Upgrade Effort Estimate** – detailed impact and cost forecast
- > **Upgrade and Migration Roadmap** – step-by-step path to a stable, modern ETL environment
- > Management presentation (if desired)

Investment

Component	Cost
Pentaho Upgrade & Migration Assessment	\$4,500 AUD + GST
